**MEASURING USING X-Y METHOD**
1. For free form, out of square, or special features pools the X-Y measurement will take the guesswork out of getting an accurate fitting cover.
2. Locate an X-Y line offset from the perimeter of the pool. The line needs to be at least 5' from any edge of the pool and 20' apart (at least 15'). Note: The line cannot cross any edge of the pool (see drawing of pool), if it does the measurements will not plot.
3. Mark points around the perimeter of the pool every 2'. For pools with radius panels use more points and always try to get the end points and center points. On straight walls sections you can use only a couple of points to describe the shape.
4. Place the end of the measuring tape on point X and record the distance to each mark on the form, repeat this with point Y. Two sets of measurements will recorded for each point, one for X and one for Y. For curved outside steps mark and record as a points in the perimeter.
5. Provide a sketch to indicate the pools direction, obstacles such as hand rails, grab rails, dive stands, etc. Use the X-Y method to determine the location of any obstructions. Note on the drawing.
